20 ga. hot rolled steel, .283 lb/cu in
.0359 x 4 x 43 x .283 = 1.75 lb.

18 ga. hot rolled steel, .283 lb/cu in
.049 x 4 x 43 x .283 = 2.39 lb.

Post completion comment...
20 ga. part is functionally appropriate;
but if ever done over, 18 ga. (.049)
would be more tactilely satisfying.
